Cloud Computing

The future of operating system.

November 6, 2007

Check out the video @ <http://www.youtube.com/watch?v=9bzLqEciLVU>

Cloud computing is a popular phrase that is shorthand for applications that were developed to be rich Internet applications that run on the Internet (or "cloud").

What this means, is that software that is normally installed on a personal computer is designed to be accessible via the Internet. These "cloud applications" then use massive data centers or servers in order to host them and allow people to utilize them fully. This is the way of the future for programs as we now know them.

Installing and updating software on a computer will become less of a "program", and more a feature of the operating system known as the Web itself. One thing of the past. For instance, a browser will become less of a "program", and more a feature of the operating system known as the Web itself.
